

Description

Recently updated with WiFi and Bluetooth capability, the new Vela Electric WiFi takes the popular Vela aluminium radiator and converts it into a practical electric-only radiator.

Completely controllable by Smartphone and available in 2 vertical and 4 horizontal models, the Vela Electric WiFi uses a revolutionary new stone/resin compound as the agent for transferring heat throughout the radiator. As a consequence there are faster heat up times and no cold spots that will impact the heat output. Standard colours are a Matt White RAL 9016 and a Matt Anthracite RAL 7016.

The unit can also be controlled without a Smartphone through the use of an additional remote controller (see options)

The addition of one, or more towel, rail attachments can also convert the Vela into a fantastic bathroom radiator.
