Heat By Design

Supermirror Designer Radiator

Description

The highly polished stainless steel cover creates a mirrored effect that keeps people guessing as to whether it is a radiator at all.

We have seen these installed in almost every room in the house, but they work spectacularly in areas where natural light needs to be channelled, such as in dark hallway or kitchen. Alternatively, when used for conservatory heating, it is a great way to bring the garden inside.

The SuperMirror now comes with the added advantage of a new 'hidden' valve system. With a simple modification to the standard radiator all the valves and pipe work are hidden away behind the rear of the panel. Access is a simple push on the cover to release the catch and pivot the radiator off the wall from the top hinge. This simple concept elevates the SuperMirror away from just being a standard radiator.
